

MessageProducerTest#testMessageName

```
sendTestPayload("camunda-rest:start?processDefinitionKey=testProcess2", headers, body);
```

ProcessDefinitionKey - message_test

String instanceId =

```
mockDynamicResult.getExchanges().get(0).getIn().getBody(String.class);
```

1. Create a receive task project
2. Write "Name" and ID (for example, email) In "General" for the task
3. Deploy it
4. Start it in swaggerui (processDefinitionKey/ start instance), put id
5. Copy id
6. Put in processinstanceid in execution/ getexecutions, put activityId
7. Execute
8. Copy id and paste it in getexecutions

```
curl -X POST "http://localhost:8080/engine-rest/process-definition/key/message_test/start"
-H "accept: application/json" -H "Content-Type: application/json" -d ""
```

curl -X GET

```
"http://localhost:8080/engine-rest/execution?processDefinitionKey=message_test&processIn
stanceId=9878a7e8-8d99-11ed-a271-00ff09576864&activityId=email_activityId" -H "accept:
application/json"
```
